

This Washington Post-ABC News poll was conducted by telephone Jan. 21-24, 2019, among a random national sample of 1,001 adults, with 65 percent reached on cell phones and 35 percent on landlines. Results have a 3.5 percentage point margin of sampling error for the full sample, including design effects due to weighting. Sampling, field work and data processing by Abt Associates of Rockville, Md.

(Full methodological details appended at the end.)

*** END ***

METHODOLOGICAL DETAILS

This poll was jointly sponsored and funded by The Washington Post and ABC News. The poll is a random sample of adults in the United States, with interviews in English and Spanish.

This questionnaire was administered with the exact questions in the exact order as they appear in this document. Demographic questions are not shown. If a question was asked of a reduced base of the sample, a parenthetical preceding the question identifies the group asked. Phrases surrounded by parentheticals within questions indicate clauses that were randomly rotated for respondents.

A dual frame landline and cell phone telephone sample was generated using Random Digit Dialing procedures by Survey Sampling International (SSI). Interviewers called landlines and cellular phone numbers, first requesting to speak with the youngest adult male or female at home. The final sample included 351 interviews completed on landlines and 650 interviews completed via cellular phones, including 432 interviews with adults in cell phone-only households.

This survey uses statistical weighting procedures to account for deviations in the survey sample from known population characteristics, which helps correct for differential survey participation and random variation in samples. The overall adult sample is weighted to correct for differential probabilities of selection among individuals who are landline-only, cell phone-only or dual users. Results are also weighted match the demographic makeup of the population by sex, region, age, education

and race/ethnicity according to the latest Current Population Survey Social and Economic Supplement. The sample is also weighted to match the average of party identification in the previous two waves of Post-ABC national polls and this current survey.

All error margins have been adjusted to account for the survey's design effect, which is 1.4 for this survey. The design effect is a factor representing the survey's deviation from a simple random sample and takes into account decreases in precision due to sample design and weighting procedures. Surveys that do not incorporate a design effect overstate their precision.

Group	Unweighted sample size	Error margin
All adults	1,001	+/- 3.5 points
Registered voters	893	4
Half samples	477-524	5-5.5
Leaned Democrats	447	5.5
Leaned Republicans	405	5.5

The Washington Post is a charter member of AAPOR's Transparency Initiative, which recognizes organizations that disclose key methodological details on the research they produce.
